### Verse 2

Figure 10 shows a sequence of three diagrams (61, 62, 63) illustrating the evolution of a 3x3 grid of numbers. The diagrams are arranged horizontally, with each diagram representing a state in a sequence. Arrows indicate transitions between states, and numbers above the arrows indicate the number of ways to reach that state.

Diagram 61 (left): A 3x3 grid with values: Row 1: 0, 2, 0; Row 2: 2, (0), (2); Row 3: 0, (2), 0. An arrow points from the state 0 in the first row to the state 2 in the first row, with a (0) above it. An arrow points from the state 2 in the first row to the state 0 in the first row, with a (2) above it. An arrow points from the state 0 in the first row to the state 2 in the first row, with a (2) above it. An arrow points from the state 2 in the first row to the state 0 in the first row, with a (0) above it.

Diagram 62 (middle): A 3x3 grid with values: Row 1: 0, 2, 0; Row 2: 2, (0), (2); Row 3: 0, 2, 2. An arrow points from the state 0 in the first row to the state 2 in the first row, with a (0) above it. An arrow points from the state 2 in the first row to the state 0 in the first row, with a (2) above it. An arrow points from the state 0 in the first row to the state 2 in the first row, with a (2) above it. An arrow points from the state 2 in the first row to the state 0 in the first row, with a (0) above it.

Diagram 63 (right): A 3x3 grid with values: Row 1: 0, 2, 0; Row 2: 2, (0), (2); Row 3: 0, 2, 2. An arrow points from the state 0 in the first row to the state 2 in the first row, with a (0) above it. An arrow points from the state 2 in the first row to the state 0 in the first row, with a (2) above it. An arrow points from the state 0 in the first row to the state 2 in the first row, with a (2) above it. An arrow points from the state 2 in the first row to the state 0 in the first row, with a (0) above it.
